# Home Page of Dr. Pradeep Verma

*Thank you for visiting my page courtesy of Angelfire. Please revisit soon as I develop this page as fast as I can.*

*Publications I have made two scientific research publications on myasthenia gravis. I am working on writing some Harlequin Romance style fiction and two non-fiction works on psychology. I am currently working on publishing on the web. Poetry I love to read any good meaningful romantic and humorous poetry that I lay my hands on. I have written over 200 poems myself but not published them. I usually wrote them for someone to present as a gift. My poems have a romantic or a comic theme. Some of them are great for serenading. Music To say that I love music really does not give you real information. I am in fact addicted to music. Here is why. I can not be separated from Jazz and classic.*

*I can enjoy some very selected opera singing also. I use country and pop for dancing. I play saxophone and crave many singers like Britany, Celine, Sharyl, Reba, Jewel, Lata, Sarah, Shania. I have not attended only two live concerts but I plan to attend more. Dancing Everyone loves to dance. I love to watch Ballet enough to send my daughters into it. I am learning ballroom and tap dancing through educational videos. I never miss any chance to gyrate my pelvis. It is hard for me not to do that if the right music is on. Canvas arts I have failed to develop a passion for the modern/abstract art. I am bit orthodox and like the realistic work like that of DaVinci. I prefer science museums (galleries) to the arts museums although I love ice sculptures. I used to paint portraits and landscapes in oil or pastels myself. Performing arts Besides ballet and figure skating I like to watch gymnastics, diving and tap or classic dances. I enjoy performing these myself but have not been able to spare enough time to be able to excel in the performing arts yet.*

## My Details

- I enjoy investing my spare hours in studying the human behaviour (mind), learning about the damage the process of human civilization has caused to the life and things on this planet and at times meditating. I also do repairs, carpentry,
- Finished 2 years postdoctoral fellowship training while conducting on research for Muscular Dystrophy Association of Canada after 4 years Neurology residency after my medical degree. Numerous additional diplomas and special courses like nuclear physics, accounting, French, German, Spanish etc.
- My father succumbed to heart surgery in 1998. My mother (retired elementary school teacher), my only brother (anaesthetist in NY) and my only trying-to-become-my-ex-wife since 1993 all have discontinued their dealings with me due to failure on their part to begin to behave properly. I demand a high level of personal morality philosophy from people which most people fail to live up to. I have had no contact with her or my 2 daughters (16 & 10) and my only son (13). I have no financial obligations towards anyone. I am fond of children and love to play with them. No chronic illness runs in our family, except that my wife probably has contracted the
